L'Art de Chauffer
The Art of Heating

Michel Cinier

BOOK

Beautiful, refined, exclusive

These exclusive towel warmers are a fusion of simple beauty with refined yet practical sculptures to create true works of art.

The art of heating in stone

OLYCAL® stone technology

The technology of using stone from the Pyrenees for the creation of radiators has been specially developed over seven years. The result is a completely new manufacturing process: The natural stone is crushed, restructured into a specially enriched paste, dried and hardened naturally for 21 days, then finished and coloured by hand.

The key benefits

- Natural, durable surface
- Pleasant, healthy radiant heat (similar to a tiled stove)
 - High, even heat storage and output values
 - Completely new design possibilities
 - Choice of hydraulic or electric operation
- Available with towel rail option

All materials, paints and varnishes used for the Cinier collection are free of hazardous substances and comply with EC directive 89/106/EEC on construction products (manufacturer's declaration).

Greenor – Cinier series that blends art and cutting-edge technology

Individually designed by Johanne Cinier, the hand-painted and sculpted models seem almost as imaginative as the creator herself. Each radiator in the Pièce Unique collection is an artistically handcrafted one-off creation.

Designed for low temperature heating (and cooling) systems (heat pumps, solar thermal, geothermal, biomass, condensing boilers).

The output of the Cinier Greenor Arte high performance radiator is an impressive 3740 W at 75/65/20 °C or 1230 W at 40/35/20 °C. This is made possible by extremely quiet, energy saving DC fans (8 fans at 1.25 W each).

The Arte high performance heating/cooling radiator is ideal in combination with a reversible heat pump for producing heating or chilled water (refrigerant-free).

Greenor – a world first, supported and recognised by the OSEO foundation for technical innovation.
International patent PCT/FR2010/00321
Publication number WO/2010/149865.

All materials, paints and varnishes used for the Cinier collection are free of hazardous substances and comply with EC directive 89/106/EEC on construction products (manufacturer's declaration).

Choice of frames in white, anthracite grey and black
